BRITISH PRICES OF COMMODITIES IN 1899.

By A. Sauerbeck.

(From the Report of the London Statistical Society.)

The following table shows the course of prices of forty-five commodities during the last twenty-two years as compared with the standard period of eleven years, 1867–1877, which in the aggregate is equivalent to the average of the twenty-five years 1853–1877: *a*

Summary of Index Numbers.

Groups of Articles, 1867–1877 = 100.

YEARS.	Vegetable food (corn, etc.).	Animal food (meat, etc.).	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.	Grand total.	Silver. *b*	Wheat harvest. *c*	Average price of consols. *d*	Average Bank of England rate. *d*
1878	95	101	90	96	74	78	88	81	87	86.4	108	95 3/16	3 1/2
1879	87	94	87	90	73	74	85	78	83	84.2	64	97 1/2	2 1/2
1880	89	101	88	94	79	81	89	84	88	85.9	93	98 3/8	2 1/2
1881	84	101	84	91	77	77	86	80	85	85.0	97	100	3 1/2
1882	84	104	76	89	79	73	85	80	84	84.9	100	100 1/4	4 1/2

1897	60	79	52	65	66	51	62	59	62	45.3	100	112 1/4	2 5/16
1898	67	77	51	68	70	51	63	61	64	44.3	120	111	3 1/4
1899	60	79	53	65	92	58	65	70	68	45.1	113	107	3 1/2
Average:													
1890–1899	61	80	63	68	71	56	66	64	66	55.8	104	103 1/2	3
1888–1897	62	81	66	70	70	59	66	65	67	61.0	101	101 1/2	2 15/16
1885–1894	65	83	68	72	71	62	68	67	69	69.2	101	99	3 1/8
1878–1887	79	95	76	84	73	71	81	76	79	82.1	97	99 1/4	3 3/16

a The index number of all the groups of articles as given in the table above was 100, for the years 1867–1877. This number is exactly the same as the average number for the twenty-five years from 1853–1877, during which time the new gold discoveries appear to have had an effect upon prices. Therefore a comparison of the aggregate prices of all commodities in a certain year with the eleven years from 1867 to 1877 is equivalent to a comparison of the whole twenty-five years from 1853 to 1877.

b Silver 60.84d. per ounce = 100.

c Wheat harvest in the United Kingdom, 1878–1883, 28 bushels per acre = 100; from 1884, 29 bushels = 100.

d Consols and bank rate actual figures, not index numbers; consols 2¾ per cent from 1889.

The index number for all commodities was 68, against 64 in 1898, or 32 per cent below the standard period 1867–1877, and 11 per cent below the ten years 1878–1887, but 3 per cent above the average of the last ten years. As compared with 1898 the advance amounted to 4 points (or 6¼ per cent), while the rise on 1896, the lowest year on record, was as much as 7 points (or 11½ per cent). The rise was smaller than was probably expected by many observers, and this is explained by the fact that the average advance for the whole year applied only to materials, and here principally to minerals, to a smaller extent to textiles, and to a very slight extent to sundry materials. Articles of food, on the other hand, were in the aggregate lower—an advantage no doubt to consumers—and were exactly on a level with 1897, so that the advance obtained in 1898 was again lost.

Four articles out of the forty-five contained in my tables showed records of lowest prices, viz. Brazil coffee, flax, coarse wool, and the average import price of tea.

MONTHLY FLUCTUATIONS OF THE INDEX NUMBERS (*a*) OF FORTY-FIVE COMMODITIES, (1867–1877)=100.

YEARS.	Jan.	Feb.	Mar.	Apr.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Year.
1885	72.3	72.6	72.5	72.5	73.3	72.7	72.2	72.2	71.1	70.4	71.1	70.8	72

1900	74.0	75.1	.....	.....	.....	.....	.....	.....	.....	.....	.....	.....	.....

a The twelve monthly figures of each year do not in all cases exactly (in the decimals) agree with the annual averages, as the latter are partly calculated from revised figures.

The index number at the end of 1899 was 13 per cent higher than at the end of 1898, and only 2 per cent lower than at the end of 1889.

Taking articles of food and materials separately, the index numbers compare thus (1867–1877=100):

	AVERAGE.			Dec., 1889	Feb., 1895	July, 1896	Dec., 1897	Dec., 1898	Dec., 1899
	1878–1887	1888–1897	1890–1899						
Food	84	70	68	73.1	63.8	60.0	66.5	65.6	65.1
Materials	76	65	64	71.2	57.0	58.6	59.4	62.4	77.5

Articles of food were a little lower, but materials 24 per cent higher than in December, 1898, while the rise for materials from the lowest point in February, 1895, amounted to as much as 36 per cent in the aggregate. Articles of food, on the other hand, were only 8½ per cent above their lowest record point in July, 1896.

The position of the six separate groups of commodities at the end of the last three years in comparison with former periods is illustrated by the following index numbers (1867–1877 = 100):

	AVERAGE.			Dec., 1897	Dec., 1898	Dec., 1899	Last year per cent.
	1878–1887	1888–1897	1890–1899				
Vegetable food, corn, etc	79	62	61	65.0	62.4	58.7	*a* 6
Animal food (meat and butter)	95	81	80	77.1	76.9	78.9	*b* 3
Sugar, coffee, and tea	76	66	63	51.0	52.5	53.7	*b* 2
Minerals	73	70	71	66.6	75.7	98.3	*b* 30
Textiles	71	59	56	48.4	49.9	71.2	*b* 43
Sundry materials	81	66	66	62.8	63.1	68.8	*b* 9

a Fall. *b* Rise.

In this comparison it must be remembered that minerals had already an advance of 14 per cent in the year 1898 against only 3 per cent for textiles.

In the course of last year prices of corn remained generally on a low level, the small wheat crop of the world of 1897 (283 million quarters) having been followed in 1898 by the largest on record (358 million quarters) and in 1899 by another good crop (324 million quarters). Meat and butter were somewhat dearer, the latter being affected by the drought in August. Sugar and the common sort of tea ruled a little higher than in the preceding year, though both articles are still on a very low basis, the average import price of all sorts of tea imported having been the lowest on record. Brazil coffee, under the influence of four large crops in succession, was lower than ever before, Santos touching 25s. per hundredweight in September, but improving again to 32s. toward the end of the year. Metals generally reached their highest points between July and October, but gave way to some extent later on, while coals obtained almost famine prices at the end of the year and early in 1900. The following comparison of prices may be of interest:

	AVERAGE.		End December, 1898	Highest July–October, 1899	End December, 1899	End January, 1900
	1867-1877	1890-1899				
Iron, Scotch.....s. per ton..	69	47	49½	75½	65½	68½
Copper.....£ per ton..	75	50	57½	79½	70	71½
Tin.....£ per ton..	105	81	86	150¾	112	130
Lead.....£ per ton..	20½	12	13½	17½	16⅝	16¾
Coals, best house coals in London.....s. per ton..	22	17½	17½	21	23	27
Coals, average export price.....s. per ton..	12½	10⅜	10	10¾	12½	14½

Iron has not been so high since 1874, but copper and tin, although very dear, were still higher during the speculation in 1887–88.

Among textiles we have to record an advance for cotton, in view of a large consumption and lower estimates of the current crop, but prices during the past year were still very low as compared with former periods. Flax touched the lowest price on record, improved gradually, and realized a sharp advance in December. Manila hemp experienced great fluctuations in conjunction with the policy of opening and again closing the port. The price was £17 per ton at the end of 1897; £24 10s. in 1898; and about £64 at the end of last year, probably the highest figure on record since 1866. Merino wool, the production of which has declined, owing to a change in breeding and to five years of drought in Australia with great mortality of sheep, advanced over 60 per cent, and has not been so high since 1880, while the bulk of coarse wools occupied the lowest level on record for the greater part of the year, and only improved to some extent toward the end. Silk was considerably higher. Among sundry materials, hides, tallow, petroleum, various oils, and indigo advanced to some extent.

The average price of silver was $27\frac{7}{16}$d. per ounce, against $26\frac{15}{16}$d. in 1898. It stood at $27\frac{5}{16}$d. (index number 44.9) at the end of 1898, and with the exception of a moderate speculative movement in April and May, the metal remained remarkably steady and closed at $27\frac{3}{16}$d. per ounce (index number 44.7). The shipments to India and China were large, and Russia purchased also a larger quantity than in the previous year.

QUARTERLY MOVEMENTS OF PRICES *a*—SUMMARY OF INDEX NUMBERS (1866–1877 = 100).

YEARS.	Quarters.	Vegetable food (corn, etc.).	Animal food (meat, etc.).	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.	Grand total.	Silver. *b*

a The four quarterly figures of each year do not in all cases exactly (in the decimals) agree with the annual averages, as the latter are partly calculated from revised figures.

b Silver 60.84d. per ounce = 100.

The quarterly numbers show the average of three monthly figures, and by thus eliminating minor fluctuations they give a more reliable comparison of the gradual changes of the various groups of commodities. They indicate the low level of articles of food generally, with a falling tendency during the year, and the uninterrupted rise of materials.

The following figures show in each case the average index numbers of all the forty-five commodities for ten years; they give the best picture of the gradual movement of the average prices of whole periods, as the ordinary fluctuations are still further obliterated:

1818–1827 = 111	1874–1883 = 90	1880–1889 = 76	1886–1895 = 68
1828–1837 = 93	1875–1884 = 87	1881–1890 = 75	1887–1896 = 68
1838–1847 = 93	1876–1885 = 85	1882–1891 = 74	1888–1897 = 67
1848–1857 = 89	1877–1886 = 82	1883–1892 = 72	1889–1898 = 66
1858–1867 = 99	1878–1887 = 79	1884–1893 = 71	1890–1899 = 66
1868–1877 = 100	1879–1888 = 78	1885–1894 = 69	

Should the present level of prices be maintained for some years, the average of whole periods will experience a turn for the better.

The past year, on the whole, will be considered a very prosperous one, and the activity of the manufacturing industries in Europe, as well as in America, was greater than at any time since 1871–1873, the period after the Franco-German war. It is true that one great industry—agriculture—was not prosperous, particularly in this country, as prices were low for corn, moderate for wheat, and very depressed for the greater part of the year for domestic wool. But the harvest was fairly good, and, as the year 1898 had been a very profitable one, a balance had probably been carried over to make good any shortcomings. The manufacturing industries, on the other hand, were exceedingly busy, and very prosperous in nearly all branches—engineering, shipbuilding, the cotton, woolen, linen, and silk industries. The working classes were fully employed, and had the great advantage of higher wages, combined with low prices for food. The war in South Africa has not had an unfavorable effect on trade up to the end of the year, but its influence on the gold supply has contributed to make the money market still tighter, in conjunction with the great internal-trade demands in Europe and the absorption of gold by the United States, India, and Argentina. No doubt speculation has contributed to the rise of some articles, particularly some of the metals, but most of the development appears to have been thoroughly sound, and the prospects for the present year are generally held to be favorable, though the slow progress of the war up to the middle of February has made the tone in this country rather quieter, while the trade on the Continent has been affected by coal strikes and the continuation of dear money in some countries.

The production of gold was estimated at £59,000,000 in 1898, and may have reached about £64,000,000 in 1899. A decline in South Africa, owing to the war, is more than compensated by a considerable increase in Australasia and a further expansion in the United States and British North America. It is a curious fact that last year's production, both in Australia and the United States, was larger than at any time during the early rich discoveries in the middle of the century. In 1898 the United States, according to their official returns, retained about £41,000,000, and in 1899 another £14,000,000. Nearly £6,000,000 in sovereigns had to be forwarded to South Africa last year, and nearly £5,000,000 were acquired by the Indian treasury, while a strong demand for gold in Agentina set in toward the end of the year to pay for the increased value of the wool clip. There is every prospect that with peace again established in South Africa gold mining will considerably increase. Extra demands from India and South America, and possibly from Italy and Spain, may have to be covered, but on the whole the supply will be more than sufficient for all requirements, and may contribute to keep up a somewhat higher range of prices or give a fresh stimulus to the production of commodities.

The arithmetical mean of the forty-five index numbers, which is 68 (against 64 in 1898), has, as in former years, again been subjected to two tests:

First, by using the same index numbers of the separate articles, but calculating each article, according to its importance in the United Kingdom, on the average of the three years 1894–1896, when the mean for 1899 is 67.0, against 64.7 in 1898, 62.5 in 1896; or on the average of the five years 1871–1875, when the mean for 1899 is only 66.3 against 64.7 in 1898, 62.6 in 1897, and 60.2 in 1896. Measured according to quantities, the rise is smaller than in the case of the ordinary index number, while in the two preceding years the advance had been larger. The result is no doubt surprising, and the explanation must be sought in the fact that such important articles as wheat, barley, oats, and potatoes were higher in 1897 and 1898 and lower in 1899, counterbalancing to some extent the movements of iron, coals, and wool, while tin, copper, and hemp, which had a very great rise in 1899, are articles of less importance.

Second, by calculating the quantities in the United Kingdom at their actual values (the production on the basis of my price tables, the imports at board of trade values, and consequently a considerable portion according to a different set of prices) and at the nominal values on the basis of the average prices from 1867–1877. In this case the mean is 67.2, against 64.6 in 1898, 63.5 in 1897, and 62.0 in 1896.

The following table gives the figures which have served for the second test:

MOVEMENTS OF FORTY-FIVE COMMODITIES IN THE UNITED KINGDOM.

(Production and imports.)

YEARS.	Estimated actual value in each period.	Nominal values at average prices of 1867–1877, showing increase in quantities.	MOVEMENT OF QUANTITIES.		Movements of quantities from period to period.	Ratio of prices according to this table 1867–1877 =100.
			1848–1850 =100.	1871–1875 =100.		
	£.	£.				
1848–1850	219,800,000	294,800,000	100	56		74.6
1859–1861	350,100,000	382,700,000	130	73	30 per cent over 1849..	91.5
1869–1871	456,600,000	481,000,000	164	92	27 per cent over 1860..	94.2
1871–1875	548,800,000	526,300,000	178	100		104.3
1874–1876	537,800,000	538,400,000	183	102		99.9
1879–1881	489,700,000	578,500,000	196	110	19 per cent over 1870..	84.6
1884–1886	445,700,000	610,100,000	207	116		73.0
1889–1891	504,100,000	685,200,000	233	130	18 per cent over 1880..	73.6
1894–1896	453,700,000	723,500,000	245	137		62.7
1896	461,200,000	743,000,000	252	141		62.0
1897	465,100,000	732,200,000	248	139		63.5
1898	498,700,000	772,400,000	262	147		64.6
1899 *a*	518,000,000	770,300,000	261	146	12 per cent over 1890..	67.2

a 1899 subject to correction after publication of the complete mineral produce returns.

The nominal values at the uniform prices of 1867–1877 show the exact movements of quantities in the aggregate. Last year's quantities were 12 per cent larger than in 1890, 46 per cent larger than in 1871–1875, and 161 per cent larger than in 1849.

The price movements of the external trade of this country—total imports into the United Kingdom and exports of British and Irish produce—were as follows, 1873 called 111 in accordance with my index number:

YEARS.	TOTAL IMPORTS INTO UNITED KINGDOM AND EXPORTS OF BRITISH AND IRISH PRODUCE.			RATIOS 1873 = 111.	
	Declared value.	Values at prices of preceding year.	Values at prices in 1873.	British trade.	My arithmetical index numbers.
	£.	£.	£.		
1873	626,000,000	.....	626,000,000	111.0	111
1889	675,300,000	664,500,000	1,005,000,000	74.6	72
1896	681,700,000	671,500,000	1,162,000,000	65.1	61
1897	685,600,000	689,500,000	1,176,000,000	64.7	62
1898	704,000,000	703,100,000	1,201,000,000	64.8	64
1899	749,700,000	724,700,000	1,124,000,000	67.1	68

It has frequently been pointed out that the board of trade values must necessarily change more slowly than the actual market prices, and will in a falling period generally be too high, and in a rising period too low; but anyhow the various tables contain abundant evidence that my index numbers give a fair and, within a few per cent, correct illustration of the course of general wholesale prices of commodities.

CONSTRUCTION OF THE TABLES.

The table of index numbers is based on the average prices of the eleven years 1867–1877, and the index numbers have been calculated in the ordinary arithmetical way; for instance, English wheat:

	s.	d.	
Average, 1867–77	54	6	= 100, average point.
Average, 1855	74	8	= 137, or 37 per cent above the average point.
Average, 1894	22	11	= 41, or 59 per cent below the average point.
Average, 1899	25	8	= 47, or 53 per cent below the average point.

The index numbers therefore represent simple percentages of the average point.

Certain articles which appear to have something in common have been grouped together, with the following result:

		EXAMPLE FOR 1899.	
		Total numbers.	Average.
1. Vegetable food, corn, etc. (wheat, flour, barley, oats, maize, potatoes, and rice)	With 8 index numbers	477	60
2. Animal food (beef, mutton, pork, bacon, and butter)	With 7 index numbers	552	79
3. Sugar, coffee, and tea	With 4 index numbers	212	53
1-3. Food	With 19 index numbers	1,241	65
4. Minerals (iron, copper, tin, lead, and coals)	With 7 index numbers	641	92
5. Textiles (cotton, flax, hemp, jute, wool, and silk)	With 8 index numbers	467	58
6. Sundry materials (hides, leather, tallow, oils, soda, nitrate, indigo, and timber)	With 11 index numbers	715	65
4-6. Materials	With 26 index numbers	1,823	70
General average	With 45 index numbers	3,064	68

The general average in the above table is drawn from all forty-five descriptions, which are treated as of equal value, and is the simple arithmetical mean as shown above.

Wholesale Prices, 1845–1899—Proportionate Results.

Deduced from the preceding table on the basis of representing by the number 100 the average prices of the six years 1845–1850.

The construction is as follows: The basis of 100 represents the average prices of the six years 1845–1850, and all the subsequent figures are calculated from that datum line. Thus as regards coffee (column 1), the price of 1st July, 1857, was equal to 151, or 51 per cent above the average prices of 1845–1850. In order to ascertain the percentage rise or fall between one date and another—as, for example, coffee—comparing 1st July, 1857, when the figure was 151, with 1st January, 1894, when the figure was 179, or a difference of 28, the rise per cent has to be measured with the quantity 151, and given, of course, a result of 23 per cent as the real advance. In the course of so long a period of years since 1845 some variations have inevitably arisen in the mode of quoting prices in the usual Prices Current. In all such cases, the nearest approach possible has been made to a uniform quotation throughout the table. In raw cotton especially there have been considerable changes of qualities introduced by the large use of Indian and Egyptian kinds. In tea, sugar, and wool also changes have occurred in the kinds most usually quoted.

[The column "Total index number" is the total for each date of all the percentage columns except that of the "Bank-note circulation." The "Total index number" does not, of course, present a full and accurate representation of the variations of prices, inasmuch as it can not allow for the relative importance of the different articles. Wheat, for example, reckons for no more in the "Total index number" than indigo; and during the years of the high price of cotton and cotton fabrics the total index number is, in a measure, unduly raised by that special cause. Still the total index number, read with the needful qualifications, may afford important inferences.]

IN THE UNITED STATES.

1840-1899.

In the following table of relative prices of groups the prices of the year 1860 are taken as a basis (= 100), and the rise or fall in price from this given base is expressed in form of relative prices or percentages. By this means the comparison of a large number of objects varying greatly in units of measurement as well as in price is rendered possible. The relative price of a group represents a simple arithmetical average of relative prices for all the articles making up the respective group. Thus, for instance, in the case of group "Food" the sum of the relative prices for all the commodities making up this group for the year 1891—5507.4—was divided by the number of articles comprised in this group—53. The result of this division—103.9—represents the relative price for this group.

The relative price for all articles is found in a similar manner by dividing the sum total of all relative prices by the total number of articles:

RELATIVE WHOLESALE PRICES IN GOLD, BY GROUPS OF ARTICLES, 1840-1899.

[From Senate Report No. 1394, second session Fifty-second Congress.]

YEARS.	GENERAL AVERAGE PRICES.

MATCHES, S-CARD.

[The prices are those received in sales of 50 gross. The stamp act went into effect October 1, 1864. The advance prior to that date was made to prevent orders from exceeding the capacity of the factory. The stamp act was repealed in 1883.]

[Per gross.]

NICKEL, REFINED.

[The data for this article were furnished by Mr. Joseph Wharton, Camden, N. J. The advance in price in 1873 was due to the adoption of nickel by Germany for use in its smaller coins. The sudden decline which came a few years later was due to the discovery of extensive deposits in New Caledonia.]
